1. What this tool does / Công cụ này làm gì

Problem	Fix
Reports say DATA_UNAVAILABLE	Same as above, or restore fresh keyword_data.csv. No product moves forward that day; no publishing.
PDF missing	Run <code>`py main.py pdfcheck`</code> - it names the exact Python and the exact install command, and creates a test PDF. / Chay pdfcheck de biet chinh xac cach sua.
<code>`pytrends`</code> error on bare <code>`py main.py`</code>	<code>`py -m pip install pytrends`</code> (only affects Google Trends check).
"Unknown command"	Check spelling; run <code>`py main.py`</code> help text. The tool never guesses.
Where are my reports?	<code>`py main.py listreports`</code> - or bookmark <code>`reports/latest/`</code> . Selftest reports live in <code>`reports/selftest/`</code> and are never "latest".
